## **Abstract**

Psychosomatic disorder is a condition in which psychological stresses adversely affect physiological (somatic) functioning to the point of distress. It is a condition of dysfunction or structural damage in physical organs through inappropriate activation of the involuntary nervous system and the biochemical response. In this framework, this review will consider anxiety disorders, from the perspective of the psychobiological mechanisms of vulnerability to extreme stress in severe chronic illnesses. Psychosomatic medicine is a field of behavioral medicine and a part of the practice of consultation-liaison psychiatry. Psychosomatic medicine in palliative care, integrates interdisciplinary evaluation and management involving diverse clinical specialties including psychiatry, psychology, neurology, internal medicine, allergy, dermatology, psychoneuroimmunology, psychosocial oncology and spiritual care. Clinical conditions where psychological processes act as a major factor affecting medical outcomes are areas where psychosomatic medicine has competence. Thus, the psychosomatic symptom develops as a physiological connected of an emotional state. In a state of rage or fear, for example, the stressed person's blood pressure is likely to be elevated and his pulse and respiratory rate to be increased. When the fear passes, the heightened physiologic processes usually subside. If the person has a persistent fear (chronic anxiety), however, which he is unable to express overtly, the emotional state remains unchanged, though unexpressed in the overt behavior, and the physiological symptoms associated with the anxiety state persist. This paper wants highlight how clinical hypnosis and meditative states can be important psychosocial and spiritual care, for the symptom management on neuro-psychobiological response to stress.

**Keywords:** Psychosomatic symptoms; clinical hypnosis; meditative states; psychosocial oncology; spiritual care; stress.

# Clinical hypnosis for palliative care in severe chronic diseases: a review and the procedures for relieving physical, psychological and spiritual symptoms.

## **Abstract**

Hypnotic treatment in severe chronic diseases, for pain and symptoms relief, has proven efficacy as adjuvant therapy, and should be offered to any individual, who expresses an interest in this method. While some theorize hypnotizability as a changing attribute of the individual, there is a growing body of literature that indicates hypnotizability may be characterized as a constellation of potentially modifiable attitudes and skills, which are strongly influenced by related factors, as suffering, in severe chronic diseases. In this article, I briefly review representative studies recognizing how clinical hypnosis in medicine is an effective complementary therapy, for pain and symptom's relief in severe chronic diseases and in palliative care. This paper highlights: (I) a scientific review to underline how clinical hypnosis has an important impact on the treatment goals and integration in relieving pain and symptoms; (II) the advanced techniques for effectively relieving pain and symptoms.

### **Abstract**

Human body is a biological, open system and maintains itself in the changing environment. Disease state is cured by many medicinal systems for healing. Esoteric healing (through introspective hypnosis, meditation and spiritual intercession) is the system where its believers regard Supreme Being as Omnipotent, Omnipresent and Omniscient. Such persons take ill health as a boon and pray through meditation that He may by His Mercy grant health or if God wishes otherwise, they happily accept it so that they keep moving ahead on their spiritual path. This study is a review of literature, where results clearly point towards better psychological and spiritual healing in patients who believe in esoteric cures. Modern science in terms of cognitive psychology or neurophysiology has begun to emphasize the role of consciousness but, that is confined only to the physical world. It is only with the advent of Param Purush Puran Dhani Soami Ji Maharaj (200 years ago) that in the religion of Saints, the ultimate consciousness or the Super Consciousness of the highest order has been revealed.

**Keywords:** Biological system; Super Consciousness; esoteric healing; faith; meditation; self-hypnosis; spiritual intercession.

# Effect of 5% lidocaine medicated plaster on pain intensity and paroxysms in classical trigeminal neuralgia.

Effect of 5% lidocaine medicated plaster on pain intensity and paroxysms in classical trigeminal neuralgia. Tamburin S, Schweiger V, Magrinelli F, Brugnoli MP, Zanette G, Polati E. Ann Pharmacother. 2014 Nov;48(11):1521-4. doi: 10.1177/1060028014544166. Epub 2014 Jul 28. PMID: 25070398. PubMed

## **Abstract**

**Objective:** Trigeminal neuralgia (TN) is a neuropathic pain condition affecting one or more branches of the trigeminal nerve. It is characterized by unilateral, sudden, shock-like, and brief painful attacks, which follow the distribution of trigeminal nerve branches, and with no other accompanying sensorimotor or autonomic signs and symptoms. Current guidelines stipulate which therapies represent first-, second-, and third-line treatments for TN, but there is a consistent mismatch between the therapeutic guidelines and the patient's preferences and expectations.

**Case summary:** We report on 2 patients with classical TN in whom conventional drugs for TN were not tolerated. In these patients, treatment with 5% lidocaine medicated plaster (LMP) resulted in reduction of pain intensity and the number of pain paroxysms.

**Discussion:** LMP is known to block the sodium channels on peripheral nerves and may cause a selective and partial block of A $\delta$  and C fibers. According to the TN ignition hypothesis, blockage of peripheral afferents by LMP may reduce pain paroxysms. The effect of LMP may outlast the pharmacokinetics of the drug by reducing pain amplification mechanisms in the central nervous system. LMP has limited or no systemic side effects.

**Conclusions:** LMP may be an effective and well-tolerated treatment option for TN in those patients who do not tolerate or who refuse other therapies. Future randomized controlled studies should better address this issue.

**Keywords:** analgesia; central nervous system; headache; neurology; pain management.

# The role of clinical hypnosis and self-hypnosis to relief pain and anxiety in severe chronic diseases in palliative care: a 2-year long-term follow-up of treatment in a nonrandomized clinical trial.

The role of clinical hypnosis and self-hypnosis to relief pain and anxiety in severe chronic diseases in palliative care: a 2-year long-term follow-up of treatment in a nonrandomized clinical trial. **Brugnoli MP, Pesce G, Pasin E, Basile MF, Tamburin S, Polati E.** *Ann Palliat Med.* 2018 Jan;7(1):17-31. doi: 10.21037/apm.2017.10.03. Epub 2017 Dec 12. PMID: 29307207 **Free article. PubMed**

## **Abstract**

**Background:** Patients with severe chronic diseases and advanced cancer receiving palliative care, have a complex range of pain and anxiety that can arise early in the course of illness. We studied two groups of patients with severe chronic diseases who participated in a nonrandomized clinical trial of early integration of clinical hypnosis in palliative care versus standard pharmacological care. The purpose of this investigation was to evaluate whether a long-term intervention of 2 years with clinical hypnosis and self-hypnosis as an adjuvant therapy in chronic pain and anxiety, is more effective than pharmacological therapy alone.

**Results:** The patients suffered from 3 main types of severe chronic diseases: rheumatic (n=21), neurologic (n=16) and oncologic (n=13). The VAS score at baseline was similar in both the hypnosis group and control group (mean  $\pm$  standard deviation, SD: 78 $\pm$ 16 and 77 $\pm$ 14, respectively). The average VAS value for the hypnosis group decreased from 81.9 $\pm$ 14.6 at baseline to 45.9 $\pm$ 13.8 at 1-year follow-up, to 38.9 $\pm$ 12.4 at 2-year follow-up. The average VAS value for the control group decreased from 78.5 $\pm$ 14.8 at baseline, to 62.1 $\pm$ 15.4 at 1-year follow-up, to 57.1 $\pm$ 15.9 at 2-year follow-up. The variance analysis indicated that the decrease in perceived pain was more significant in the hypnosis group patients than in the control group, after 1- and 2-year follow-up (P=0.0001). The average HAM-A Hamilton anxiety score decreased from 32.6 at baseline to 22.9 and 17.1 respectively at 1-year and 2-year follow-up for the hypnosis group, but it remained almost the same in the control group (29.8, 26.1 and 28.5 at baseline, first and second year respectively). ANOVA showed that the difference between the two groups was statistically significant (P<0.0001). Univariate analysis showed a 4-times greater risk of increasing analgesic medicines and opioids in the control group (adj.IRR: 4.36; 95% CI: 1.59-12.0) after 2-year follow-up.

# Changes in laser-evoked potentials during hypnotic analgesia for chronic pain: a pilot study.

Changes in laser-evoked potentials during hypnotic analgesia for chronic pain: a pilot study. Squintani G, Brugnoli MP, Pasin E, Segatti A, Concon E, Polati E, Bonetti B, Martinella A. *Ann Palliat Med*. 2018 Jan;7(1):7-16. doi: 10.21037/apm.2017.10.04. Epub 2017 Nov 10. ## Abstract:

The dominant hand in ten patients with chronic pain was tested with LEPs during: (I) resting state; (II) clinical hypnosis, and (III) distraction of attention. Nociceptive responses elicited by LEPs were graded on a numerical rating scale (NRS), and the change in N2-P2 complex amplitude during the three experimental conditions was analyzed.

**Results:** N2-P2 amplitudes were significantly decreased during the hypnotic state as compared to the resting state and distraction of attention.

**Conclusions:** Hypnosis is a modified state of consciousness that may differ from mental relaxation or distraction of attention from pain. A reduction in N2-P2 amplitude may result from the modulation of diverse brain networks, particularly the frontolimbic pathways, which could modify noxious stimuli input processing during hypnotic analgesia. Our findings indicate that several different brain mechanisms may act together in hypnosis and distraction of attention during pain processing and that clinical hypnosis may provide a useful non-invasive pain relief therapy.

**Keywords:** N2-P2 complex; Pain; distraction; hypnosis; laser-evoked potentials (LEPs).

Patients under hypnosis showed significant N2/P2 amplitudes decrease compared to resting state and distraction.

Hypnosis is a physiological modified state of consciousness that may differ either from mental relaxation or distraction from pain. N2/P2 amplitude reduction may depend on different brain networks activation, in particular frontolimbic pathways, which could modify noxious stimuli input processing during hypnotic analgesia. Our results indicate that different brain mechanisms might act in hypnosis and distraction during pain processing.

# Building Blocks for the Development of a Self-Consistent Electromagnetic Field Theory of Consciousness.

## Building Blocks for the Development of a Self-Consistent Electromagnetic Field Theory of Consciousness.

**Kepler J.** Front Hum Neurosci. 2021 Sep 28;15:723415. doi: 10.3389/fnhum.2021.723415. eCollection 2021. PMID: 34650416 **Free PMC article.** PubMed

### **Abstract**

The goal of this work is to compile the basic components for the construction of an electromagnetic field theory of consciousness that meets the standards of a fundamental theory. An essential cornerstone of the conceptual framework is the vacuum state of quantum electrodynamics which, contrary to the classical notion of the vacuum, can be viewed as a vibrant ocean of energy, termed zero-point field (ZPF). Being the fundamental substrate mediating the electromagnetic force, the ubiquitous ZPF constitutes the ultimate bedrock of all electromagnetic phenomena. In particular, resonant interaction with the ZPF is critical for understanding rapidly forming, long-range coherent activity patterns that are characteristic of brain dynamics. Assuming that the entire phenomenal color palette is rooted in the vibrational spectrum of the ZPF and that each normal mode of the ZPF is associated with an elementary shade of consciousness, it stands to reason that conscious states are caused by the coupling of the brain to a particular set of normal modes selectively filtered from the full frequency spectrum of the ZPF. From this perspective, the brain is postulated to function as a resonant oscillator that couples to a specific range of ZPF modes, using these modes as a keyboard for the composition of an enormous variety of phenomenal states. Theoretical considerations suggest that the brain-ZPF interface is controlled by altering the concentrations of neurotransmitters, placing the detailed study of the neurotransmitter-ZPF interaction at the center of future research activities.

**Keywords:** coherent states; consciousness; electromagnetic field theory; neurotransmitters; phase transitions; quantum electrodynamics; resonance; zero-point field.

## **Abstract**

Owing to the increasing importance of clinical hypnosis in pain therapy and palliative care, there is a growing interest in uncovering the mechanism underlying hypnotic analgesia. The neurophysiological findings suggest that the hypnotic state is associated with an altered operating mode of the brain that is clearly different from the normal operating mode. While in the normal operating mode a dolorogenic stimulus induces a highly synchronized large-scale activity pattern that leads to the experience of pain, the altered operating mode inhibits the synchronization of spatially divided brain regions. As a consequence, the conscious experience of pain cannot arise. In order to gain a deeper understanding of the mechanism, a novel theoretical framework is made use of. It accepts consciousness as a fundamental property of the universe and is based on the hypothesis that the whole range of phenomenal qualities is built into the frequency spectrum of a ubiquitous background field. The body of evidence supports the view that in the normal operating mode our brains act as filters that extract the plethora of phenomenal nuances selectively from this field. In the altered operating mode, which establishes under hypnotic conditions, the extraction of phenomenal qualities is partially prevented. From this perspective, hypnotic analgesia is due to an impairment of the fundamental mechanism underlying conscious perception.

# Cosmopsychism and Consciousness Research: A Fresh View on the Causal Mechanisms Underlying Phenomenal States.

Cosmopsychism and Consciousness Research: A Fresh View on the Causal Mechanisms Underlying Phenomenal States. **Kepler J, Shani I.** Front Psychol. 2020 Mar 5;11:371. doi: 10.3389/fpsyg.2020.00371. eCollection 2020. PMID: 32210886 **Free PMC article. PubMed**

**Abstract:** Key insights from modern physics suggest that the modulation mechanism is identical with the fundamental mechanism underlying quantum systems, resulting in the conclusion that a coherently oscillating neural cell assembly acquires phenomenal properties by tapping into the universal pool of phenomenal nuances predetermined by the UFC, or more specifically, by entering into a temporary liaison with the UFC and extracting a subset of phenomenal tones from the phenomenal color palette inherent in the basic structure of the UFC. This hypothesis is supported by a substantial body of empirical evidence.

**Keywords:** explanatory gap; hard problem of consciousness; long-range coherence; modulation mechanism; neural correlates of consciousness; quantum systems; ubiquitous field of consciousness; zero-point field.

Laying the foundations for a theory of consciousness: the significance of critical brain dynamics for the formation of conscious states.

Laying the foundations for a theory of consciousness: the significance of critical brain dynamics for the formation of conscious states. **Kepler J.** Front

Hum Neurosci. 2024 Apr 26;18:1379191. doi: 10.3389/fnhum.2024.1379191. eCollection 2024. PMID: 38736531

**Free PMC article. PubMed**

### **Abstract**

Empirical evidence indicates that conscious states, distinguished by the presence of phenomenal qualities, are closely linked to synchronized neural activity patterns whose dynamical characteristics can be attributed to self-organized criticality and phase transitions. These findings imply that insight into the mechanism by which the brain controls phase transitions will provide a deeper understanding of the fundamental mechanism by which the brain manages to transcend the threshold of consciousness. This article aims to show that the initiation of phase transitions and the formation of synchronized activity patterns is due to the coupling of the brain to the zero-point field (ZPF), which plays a central role in quantum electrodynamics (QED).

## Abstract:

This article presents a new interpretation of the consciousness-related neuroscientific findings using the framework of stochastic electrodynamics (SED), a branch of physics that sheds light on the basic principles underlying quantum systems. It is propounded that SED supplemented by two well-founded hypotheses leads to a satisfying explanation of the neural correlates of consciousness. The theoretical framework thus defined is based on the notion that all conceivable shades of phenomenal awareness are woven into the frequency spectrum of a universal background field, called zero-point field (ZPF), implying that the fundamental mechanism underlying conscious systems rests upon the access to information available in the ZPF.

**Abstract:** The main goal of this article consists in addressing two fundamental issues of consciousness research and cognitive science, namely, the question of why declarative memory functions are inextricably linked with phenomenal awareness and the question of the physical basis of memory traces. The presented approach proposes that high-level cognitive processes involving consciousness employ a universal mechanism by means of which they access and modulate an omnipresent background field that is identified with the zero-point field (ZPF) specified by stochastic electrodynamics (SED), a branch of physics that deals with the universal principles underlying quantum systems. In addition to its known physical properties and memory capacities, the ZPF is hypothesized to be an immanently sentient medium.

## Abstract

Palliative care in the ICU should involve a multidisciplinary team, to mitigate patients suffering and futility. Providing spiritual support in the ICU is an important aspect of holistic patient care too. Increasingly sophisticated tools for diagnosing and treating pain, as those involving artificial intelligence, might favour disparities in access, cause informed consent problems, and surely, they need prudence and reproducibility. Pain clinicians worldwide continue to face the ethical dilemma of prescribing opioids for patients with chronic noncancer pain. Balancing the need for effective pain relief with the risk of opioid misuse, addiction, and overdose is a very controversial task.

## Abstract

SSTS may be an interesting option for postoperative analgesia in gynecologic procedures. The efficacy in the management of dynamic pain is an interesting outcome that needs to be compared with the other standards of pain management, such as neuraxial techniques. Rigorous studies are required to give conclusive evidence, but this is the first report, to our knowledge, of SSTS use in open gynecologic procedures. Our preliminary experience encourages the routine application of SSTS in gynecologic surgery and will help designing future randomized controlled trials on the topic.

PubMed

## Abstract

- **Objective:** The purpose of this study was to evaluate the feasibility and efficacy of laparoscopic radiofrequency ablation of uterine fibroids. The median number of myomas treated per patient was 1 (1-3). The median baseline volume of the dominant myoma was 67.2 cm<sup>3</sup> (14.8-332.8). No intraoperative or postoperative complications occurred. The median reductions in myomas volume were 41.5%, 59%, and 77% at 1, 3, and 6-months, follow-up evaluation, respectively. No further change in fibroid size was observed at 9 months and 1 year. A significant improvement in the symptoms score and QOL score was observed at 3 and 6 months, follow-up.
- **Conclusion:** In this pilot study, laparoscopic radiofrequency ablation successfully reduced fibroid symptoms and fibroid volume in short-term follow-up. Additional studies are needed before its efficacy and safety can be confirmed.

Perandini A, Perandini S, Montemezzi S, Bonin C, **Bellini G**, Bergamini V.J Obstet Gynaecol Res. 2018 Feb;44(2):292-297. doi: 10.1111/jog.13523. Epub 2017 Nov 2. PMID: 29094417

PubMed

## Abstract

Deep endometriosis of the rectum is a highly challenging disease, and a surgical approach is often needed to restore anatomy and function. Two kinds of surgeries may be performed: radical with segmental bowel resection or conservative without resection. Most patients undergo magnetic resonance imaging (MRI) before surgery, but there is currently no method to predict if conservative surgery is feasible or whether bowel resection is required. The aim of this study was to create an algorithm that could predict bowel resection using MRI images, that was easy to apply and could be useful in a clinical setting, in order to adequately discuss informed consent with the patient and plan the an appropriate and efficient surgical session.

## Abstract

**Objectives:** To assess the pharmacological treatment and the control of major modifiable cardiovascular risk factors in everyday practice according to the patients' cardiovascular risk level.

**Methods:** In a cross-sectional study general practitioners (GPs) had to identify a random sample of their patients with cardiovascular risk factors or diseases and collect essential data on the pharmacological treatment and control of hypertension, hyperlipidemia, and diabetes according to the patients' cardiovascular risk level and history of cardiovascular disease. Participants were subjects of both sexes, aged 40-80 years, with at least one known cardiovascular risk factor or a history of cardiovascular diseases.

**Results:** From June to December 2000, 162 Italian GPs enrolled 3120 of their patients (2470 hypertensives, 1373 hyperlipidemics, and 604 diabetics). Despite the positive association between the perceived level of global cardiovascular risk and lipid-lowering drug prescriptions in hyperlipidemic subjects (from 26% for lowest risk to 56% for highest risk  $p < 0.0001$ ) or the prescription of combination therapy in hypertensives (from 41% to 70%,  $p < 0.0001$ ) and diabetics (from 24% to 43%,  $p = 0.057$ ), control was still inadequate in 48% of diabetics, 77% of hypertensives, and 85% of hyperlipidemics, with no increase in patients at highest risk. Trends for treatment and control were similar in patients with cardiovascular diseases.

## Abstract

**Background:** Chronic Kidney Disease (CKD) and its clinical evolution are an emerging issue, due to an increasingly aging population. Consequently, the evaluation of integrative strategies to manage the decline in renal function is warranted. The previous evidence indicates that a biophysical integrated approach can significantly improve renal function. Nevertheless, controlled trials assessing the clinical efficacy of this strategy are still needed.

**Methods:** A 12-month controlled study was designed to assess the clinical outcome of a group of elderly patients affected by stage II/IIIa CKD randomly assigned to either control or biophysical treatment. In addition to the standard treatment with renin-angiotensin-aldosterone system inhibitors, the biophysical group underwent electromagnetic information transfer through aqueous system procedure every 3 months. Estimated glomerular filtration rate (eGFR), according to CKD-epidemiology collaboration formula, was calculated at baseline and every 3 months.

**Results:** A total of 238 patients were included in the study, 118 ( $73.9 \pm 3.8$  years) in the biophysical therapy group and 120 ( $74.6 \pm 4.2$  years) in the control group. At baseline, mean eGFR was  $69 \pm 11.8$  ml/min in the biophysical group and  $70.7 \pm 11.5$  ml/min in the control group. After 1 year, eGFR was  $74.1 \pm 12.3$  ml/min in the biophysical group, compared to  $66.3 \pm 11.9$  ml/min in the control group, with a statistically significant difference between groups ( $p < 0.0001$ ). The observed improvement in eGFR in the biophysical group was independent of age, gender, and antihypertensive treatment.

## Abstract:

Malignancy or cancer has been known to exist more than five thousand years. Cancer is the uncontrolled growth of cells as a result of mutation. The cause of mutation is unknown and probably many factors such as bacteria, viruses, air pollution, and a variety of chemicals play a role. Many researches suggest that psychological, regional, religious, and social factors are also important.

## IPNOSI CLINICA IN MEDICINA PSICOSOMATICA

Neuroscienze, Neurobiochimica, Clinica e Tecniche Ipnotiche

Di Maria Paola Brugnoli

ORCID: <https://orcid.org/0000-0003-3920-4118>

(versione in lingua italiana)

- Questo libro esplora l'ipnosi clinica come strumento terapeutico nelle malattie psicosomatiche, studiando solide basi neuroscientifiche e neurobiochimiche, supportate da una rigorosa revisione scientifica. Dimostra come l'ipnosi agisca sul sistema nervoso e sui processi neurobiologici del paziente, ma sempre con un'attenzione al benessere integrale della persona, attraverso una pratica clinica umana e attenta. Attraverso l'analisi delle classificazioni ICD-11 e DSM-5, offre una visione chiara delle malattie psicosomatiche, approfondendone le cause e i meccanismi di sviluppo. L'ipnosi, in questo scenario, non è solo una tecnica medica e psicologica, ma un mezzo per toccare in profondità la complessa relazione tra mente e corpo, favorendo complesse risposte neurofisiologiche e psicologiche che riconnettono il paziente con il suo equilibrio interiore.

## **Bioethics & Consciousness**

Edited by Alberto García Gómez  
María Paola Brugnoli  
Alberto Carrara

- Alberto Garcia, Maria Paola Brugnoli, Alberto Carrara (Editors)
- The study of consciousness and its psychological and neuroscientific correlates is of major importance for all scientists and clinicians today. However, only a multidisciplinary study can make us understand the ultimate reality of consciousness. This book not only reviews the neuroscientific and psychological foundations and phenomena of consciousness, awareness, self-consciousness and neurobioethics, but also provides a new, interdisciplinary model of the current scientific studies and definitions of consciousness. As such, it offers a multidisciplinary bridge between the brain, mind, philosophy, the introspective self-consciousness, the human identity and free will.

# Terapie ancestrali, di Alessandro Norsa

Dott. Alessandro Norsa, Psicologo, Psicoterapeuta ad indirizzo ipnologico, vive e lavora a Verona

<https://www.alessandronorsa.com/>

## TERAPIE ANCESTRALI: VIAGGIO NEL MONDO DEI GUARITORI TRADIZIONALI

- Venti ricercatori di diversa provenienza culturale e geografica investigano direttamente sul campo sulle tradizioni di guarigione ancestrale coinvolgendo i locali medicine men.
- Uno studio appassionante e ricco di dettagli risultato di una ricerca coordinata da Alessandro Norsa e realizzata da una decina di ricercatori universitari antropologi di lingua e cultura indigena (tra cui Bangladesh, Perù, Messico, Paesi islamici, Spagna, Cuba e Georgia) ed arricchita da differenti punti di osservazione quali il figlio di un guaritore africano, uno sciamano nepalese, una guaritrice sarda, un adepto brasiliano di tradizione umbanda, un medico messicano, una mediatrice culturale e una turista italiana ma anche migranti nigeriani e lituani.
- Tanti approcci diversi che si intersecano e si arricchiscono vicendevolmente portando alla luce quelle tradizioni di cura ancestrale sulla via dell'oblio, svelandone ricchezze e segreti ignoti fino ad ora alla cultura occidentale.

## TERAPIE ANCESTRALI

A cura di Alessandro Norsa

# Maschere divine, di Alessandro Norsa

## MASCHERE DIVINE

STORIA DEI RITI DI  
PASSAGGIO INVERNALI

A CURA DI ALESSANDRO NORSA

### Maschere divine.

- Dietro le maschere tradizionali si nasconde il lungo viaggio dei riti, un ininterrotto rapporto del contatto con le divinità protettrici invocate per garantire la sussistenza della comunità.
- Le prime tracce della produzione della maschera portano da un pensiero magico-simbolico in cui rappresentativi volti stilizzati divenivano un utile tramite con un ricco mondo spirituale. In queste pagine si offre al lettore una chiave interpretativa per accedere alla conoscenza delle maschere ancestrali ed il loro rapporto tra divinità, spiriti e gli antichissimi riti esorcistici o propiziatori:
- evocazioni di un anelito di fede e speranza che, a partire dagli albori dell'umanità, si è protratto fino ai nostri giorni.

# Ipnosi oltre frontiere, di Alessandro Norsa

## IPNOSI OLTRE FRONTIERE: TRA TERAPIE ANCESTRALI E STATI DEIFICATI DI COSCIENZA

- L'uso dell'ipnosi per il trattamento dei problemi e delle sofferenze umane è probabilmente antico quanto la storia dei tentativi dell'uomo di curare i sofferenti. Sebbene con forme e nomi diversi, l'ipnosi era nota anche nelle più antiche popolazioni primitive, che la usavano a scopo non soltanto terapeutico ma anche divinatorio: i fenomeni dell'ipnosi erano letti come dono o potenza del divino e applicati alle situazioni più disparate tramite il profeta, o lo sciamano, o il medico o il sacerdote.
- Come già sottolineato da Katalin Varga Direttore del Dipartimento di Psicologia della Eötvös Loránd University di Budapest al Convegno Hypnosis New Generation del 2019, le ricerche avviate da Alessandro Norsa in ambito ipnologico su questa tematica "hanno aperto un nuovo filone di ricerca".
- Il presente volume è una innovativa indagine di studio di questi metodi che, partendo dalle origini della cultura occidentale, si estende alle altre aree del mondo in cui ancora oggi sono praticati conservando tutta il fascino e la potenza della cultura delle origini.
